

Executive Summary

Kipos: An AI-Enhanced Suite of Tools for Every Stage of the Church Planting Journey.

Derived from the Greek word for garden, **Kipos** will be a digital platform with tools designed for church leaders and church planters, aiming to rapidly increase the number of new churches globally.

Key Features

- Fusion of new technology with decades of church planting wisdom, experience, and expertise to help start churches on an entirely different scale than ever before.
- The tools within the **Kipos** ecosystem have broad applications for assessing, developing, and resourcing church leaders, staff, and volunteers.
- AI plays a crucial role in the **Kipos** ecosystem. The AI-enhanced tools enable rapid development, expand the capabilities and capacity of church leaders, and empower a broader group of people than ever before with the training and resources necessary for church startup and leadership.
- Data collected through the platform adds significant value, providing insights, enhancing decision-making processes, and informing future understanding of various church leadership and startup roles.

Current Tools in Development

- **Church Leader Copilot**
 - Enhanced management and assessment tools for potential and current church leaders.
- **Church Planter Copilot**
 - Tools to equip a church startup leader to move from idea to execution, and beyond.

We Need Your Help

- To develop the tools and scale the platform, an investment of \$500,000 is needed. This will support the necessary infrastructure and feature development to empower countless church leaders.
- By integrating new technology with decades of experience, we can foster thriving, growing, multiplying churches for the next generation.
